
Sample Output for Review

We're building a tool that monitors FDA regulatory activity and maps it to a company's specific products. Below is sample output generated from real FDA data. We'd like your expert assessment of whether the analysis is accurate.

Prepared by: Rashaad Baten, Policy Canary

Date: March 2026

Contact: rashaad@polycanary.io

Context

What you're looking at and where the data comes from.

What This Is

Policy Canary ingests public FDA data, uses AI to identify which regulatory changes affect which products, and generates analysis with action items. The two outputs below are what a subscriber would receive: a weekly briefing and an urgent alert.

Everything is AI-generated from public FDA sources. Every item includes a link to the original source document so you can verify the analysis against the primary source.

Data Sources

SOURCE	WHAT IT PROVIDES
Federal Register API	Rules, proposed rules, notices
openFDA API	Enforcement actions, recalls
FDA RSS Feeds	Recalls, safety alerts, press releases
FDA Warning Letters	~3,300 letters across all FDA centers

Demo Product Portfolio

The sample output was generated for a test portfolio of 4 products across 3 sectors:

PRODUCT	BRAND	TYPE
Miss Vickie's Spicy Dill Pickle Kettle Cooked Potato Chips	Frito-Lay	Food
Ultra Repair Cream Coconut Vanilla	First Aid Beauty	Cosmetic
Bum Isolate Protein	RAW	Supplement
OxyElite Pro	USPlabs	Supplement

Weekly Briefing

The core product: a weekly email customized to the subscriber's products. Organized in three zones — items that directly affect their products, items in their industry, and everything else across FDA. Source links are clickable.

PRODUCT INTELLIGENCE BRIEFING — GENERATED FROM REAL FDA DATA

POLICY CANARY

Product Intelligence Briefing — March 7, 2026

4 of your 4 products are affected this week.

Frito-Lay's voluntary allergy alert on undeclared milk in Miss Vickie's Spicy Dill Pickle Kettle Cooked Potato Chips leads this cycle, alongside FDA safety notifications flagging hidden ingredient concerns in OxyElite Pro and a cosmetic product alert touching Ultra Repair Cream Coconut Vanilla.

YOUR PRODUCTS

Miss Vickie's Spicy Dill Pickle Kettle Cooked Potato Chips

Urgent

Confirmed Recall

Frito-Lay has issued a voluntary allergy alert and recall for select 8 oz. bags of Miss Vickie's Spicy Dill Pickle Potato Chips due to the potential presence of undeclared milk. The recall was initiated because some bags might contain jalapeño-flavored potato chips, which contain milk. Individuals with a milk allergy or sensitivity are at risk of a serious allergic reaction if they consume the product. The affected products were distributed in Arkansas, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas.

Review

The FDA has issued a Request for Information (RFI) concerning the labeling and prevention of gluten cross-contact in packaged foods. The agency seeks public input on adverse reactions to non-wheat gluten-containing grains (rye and barley) and oats (due to cross-contact), as well as challenges in identifying these ingredients on labels. This RFI is a preliminary step to gather data and inform future regulatory actions aimed at improving transparency for consumers with celiac disease or gluten sensitivities. Comments are open for 60 days.

OxyElite Pro

Urgent

The FDA has issued a safety alert warning consumers about products marketed for sleep, skin, bodybuilding, weight loss, sexual enhancement, and pain/arthritis that may contain dangerous, hidden drug ingredients. These products are often falsely advertised as dietary supplements, food, or all-natural treatments and pose serious health risks. The alert encourages consumers to check the Health Fraud Product Database and consult healthcare professionals before buying or trying new health products.

Urgent

The FDA has issued a safety alert warning consumers about products marketed for health issues that are contaminated with dangerous hidden ingredients, including prescription drugs, banned substances, and harmful chemicals like sibutramine. These products, often sold as dietary supplements for sexual enhancement, weight loss, pain, bodybuilding, or sleep, are illegal and pose significant health risks. The FDA advises consumers to be cautious, check the health fraud product database, and consult a healthcare professional before using such products, as they are not FDA-reviewed or approved.

What We'd Like to Know

We're looking for a practitioner's honest read on the output above.

1. Is the analysis accurate?

Are the regulatory items correctly matched to the products? Are the summaries factually right? Is anything misleading or wrong?

2. Are we flagging the right things as urgent?

Items are tagged Urgent, Watch, or Review. Does our urgency calibration match how you'd prioritize these for a client?

3. What would a practitioner catch immediately that we're getting wrong?

Anything that jumps out — missed context, wrong framing, action items that don't make sense, regulatory nuance we're flattening. We want the unfiltered read.

Any additional observations are welcome. We're trying to get this right before putting it in front of anyone.
